

## Cable Quad FC-T-2S-T Rk0,3

RAILWAY SIGNALLING CABLES, MULTICORE, PE SHEATH FOR EXTERNAL INSTALLATIONS WATERBLOCKING AND RODENT RESISTANT

## **Description and application**

Cables from 1 to 25 quads of 0.9 or 1.4 mm, polyethylene insulated. Quads are stranded in layers to form the core which is then protected by an anti inductive sheath with reduction factor 0,3.

They are used as control cables up to 90 kHz signals, especially in rail infrastructures, when protection is required against the induction of high voltage lines. For installation in ducts or directly buried in tunnels where protection against rodents and fire resistant characteristics are needed.

CPR Classification: B2ca, s1a, d1, a1. (Check availability)

## Construction

- Conductors: Annealed copper solid wire, 0.9 or 1.4 mm. diameter.
- Insulation: Solid polyethylene.
- Cabling element: The pairs into the quads are identified by colour of the wires insulation in each layer according to the codes in the table below.
- Core formation: Stranded in Layers.
- Screening: Corrugated copper tape longitudinally applied with overlap.
- Inner sheath: LSZH violet material.
- Armouring: Two helically applied steel tapes (0,5 mm thickness).
- Outer sheath: UV resistant violet LSZH RAL 4008.
  - Sheath marks: The sheath shall be marked, at a regular intervals, with the following information:
    - CABLESCOM / year / Length markings

Certified Company ISO 9001 - ISO 14001
